NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bom.tmc.edu/dos/Genbank.draft_data.html).
NOTE: This is a 'working draft' sequence it currently consists of 57 contigs. The true order of the pleces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are reported as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

```
corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one MI3 subclone; and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Swr. SWISSPROT? IT:, TREMBL, WP:, WORMPEP; Information on the WORMPEP database can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
humquery&sanger.ac.uk Clone requests: clonerequest&sanger.ac.uk On May 25, 2002 this sequence version replaced g1:20520452. During sequence assembly data is compared from overlapping clones. Martie differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Db 189669 CICITITIGCCCACCCAGGCCCGACTICCICTGAAATGGAIGGCCCCCGAGAGCAICIT 189728
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-58El3 is from the RPC1-23 Mouse PAC Library constructed by the group of Pieter de Jong.

Ihis is the 5' sequence of the clone insert
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKF2); Email s.wiemannéMarz-heidelberg.de;
sequenced by LMU (Ludwig Maximilians University,
Munich/Germany) within the cDNA sequencing consortium of the German
Genome Project.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AL042601 666 bp mRNA linear EST 29-FEB-2000 DKF2p434L0121_r1 434 (synonym: htes3) Homo sapiens cDNA clone DKF2p434L0121 5', mRNA sequence.
